Chemo Brain Treatment Study

Have you had chemotherapy for breast cancer and noticed difficulties with your attention, learning and memory?

We are inviting breast cancer survivors to participate in a 6-week chemo brain treatment trial.

You must be:
• Stage I, II, or III breast cancer survivors
• 1-5 years post-chemotherapy
• Experiencing problems with their attention, learning, and/or memory.
• Between the ages of 35-80
• Non-smokers (for last 5 years)

You will be asked to:
• Take the study medication once a day for the duration of the study
• Donate a small blood sample
• Participate in five (5) study visits that involve completing attention, learning and memory tests
