
The background of the entire page is a fluorescence microscopy image of a cell culture. The cells are stained with a red fluorescent marker, and there are several distinct, elongated structures that appear to be formed by the cells, possibly representing a specific cell type or a particular stage of cell growth. These structures are outlined in a bright green fluorescence, which likely represents a different marker or a specific component of the cells. The overall appearance is that of a complex, interconnected network of cells.
