phrases.
Every Instrument manufactured by the New Brunswick Scientific Co., Inc. is warranted to be free from defects in material and workmanship. This apparatus, with the exception of glassware, lamps and electrodes (where supplied), is warranted against faulty components and assembly for 2 years in the United States & Canada and for 1 year elsewhere. Our obligation under this warranty is limited to repairing or replacing the instrument or part thereof, which shall, upon our examination, prove to be defective. The warranty period begins at the date of shipment. This warranty does not extend to any NBS products which have been subjected to misuse, neglect, accident or improper installation or application; nor shall it extend to products which have been repaired or altered outside the NBS factory without prior authorization from the New Brunswick Scientific Co., Inc.

1 OVERVIEW

The C-25 Classic Incubator and C-25KC Classic Refrigerated Incubator Shakers are large capacity shakers utilizing an eccentric counter balanced drive to provide horizontal plane rotary motion in a 1” (2.54 cm) circular orbit. A Proportional/Integral (PI) Microprocessor controller with instantaneous digital feedback controls the speed over a range of 50-400 rpm.

The C-25 provides temperature control over a range of 7°C above ambient to 60°C, and the C-25KC provides temperature control over a range of 15°C below ambient (minimum 4°C) to 60°C. Ambient temperature is defined as the temperature within one meter of the shaker.

The shakers may be operated either continuously or in a timed mode via a programmable timer for shaking periods of 0.1 hr. to 99.9 hrs.

For safe operation, both the C-25 and C-25KC are designed with a safety switch that automatically stops the shaker mechanism when the lid is lifted.

In addition, the C-25 and C-25KC are equipped with visual and audible alarms that alert the user to the following conditions:

- The end of a timed run
- Deviations of shaking speed
- Deviations of temperature setpoint
- Power failure
- Lid open

A wide variety of platforms can be used with the C-25 or C-25KC. Dedicated platforms are available for a variety of flask sizes. Universal platforms, utility trays, utility carriers and test tube racks are also available.

2 INSPECTION, VERIFICATION & UNPACKING OF EQUIPMENT

2.1 Inspection of Boxes

After you receive your order from New Brunswick Scientific, inspect the boxes carefully for any damage that may have occurred during shipping. Report any damage to the carrier and to your local NBS Sales Order Department.

2.2 Unpacking

Save all packing materials and User’s Guide. If any part of your order was damaged during shipping, missing pieces, or fails to operate properly, please fill out the Customer Satisfaction Form 6300 provided and return by fax.

**WARNING!**
Do not attempt to lift the C-25 or C-25KC by hand. Always use a lifter or suitable equipment when raising the unit.

There are two small plastic straps holding the bearing housing in place during shipping. Remove the straps from the bearing housing once the unit is unpacked and inspected.

2.3 Inspection of Equipment

Verify against your NBS packing list that you have received the correct materials. You should have received a Power Kit (power cord, fuse, hex wrench and key) with your shaker. Make sure your electrical supply matches the electrical specification of the power kit and the shaker (both of which should be the same).
3 PREPARING THE LOCATION

3.1 Physical Location

It is essential that the instrument be situated in an area where there is sufficient space for the shaker and platform to clear walls and obstructions during operation. The surface on which the unit is placed must be smooth, level, and able to support the shaker under full load operating conditions.

**WARNING!**

Do not attempt to lift the C-25 or C-25KC by hand. Always use a lifter or suitable equipment when raising the unit.

The feet can be adjusted for necessary leveling. Loosen the locking nuts on the threaded studs attached to the feet of the shaker. Retighten when you have achieved the correct level for your shaker.

3.2 Environment

The shaker is designed to operate optimally in the following ambient conditions:

- 5 - 35°C
- 20 to 90% Relative Humidity non-condensing
4 FEATURES

4.1 Keypad

Figure 1: Keypad

LED DISPLAY

The digital display on the control panel is a three-digit LED DISPLAY. During normal shaker operation the display will indicate:

- Shaker status (on/off)
- Shaking speed
- Chamber temperature
- Setpoints
- Hours remaining (timed run)
- Lid open

USER INTERFACE KEYS

- **START/STOP** This key is used to start or stop the shaker. It will also activate or stop the timer when a timed run is desired.

- **SELECT** This key is used to change the displayed parameter.
• ▲(UP), ▼(DOWN) These keys are used to adjust the setpoint of a displayed parameter up or down. They also allow the user to enter the SET MODE for setpoint changes.

STATUS INDICATORS

Four status indicator lights are located to the left of the LED DISPLAY. They are:

• MAINT Remains lit after 10,000 hours of use. Accumulated running time is internally monitored and may be displayed as a guideline.

• SET Indicates that the shaker is in the SET MODE and setpoints are being displayed and can be altered.

• TIME Indicates that the timer is in operation. The shaker can be programmed to run for a preset time from 0.1 hr. to 99.9 hrs. The timer can be disengaged without stopping an ongoing run.

• MUTE Indicates the status of the audible alarm. When illuminated, the audible alarm is disabled.

FUNCTION INDICATORS

Four function indicator lights are located to the right of the LED DISPLAY. They indicate the current parameter being displayed.

• RPM revolutions per minute

• HOURS time remaining

• °C interior chamber temperature

• ★ not applicable

4.2 Platform Assemblies

The C-25 and C-25KC can be used with a wide variety of NBS 18 x 30 inch (46 x 76 cm) platforms, which will accept a variety of clamps for flasks test tubes, etc. A platform is a separate item that is required for operation. See Section 9, Replacement Parts & Accessories, for details.
5  GETTING STARTED

5.1 Installation of Platform

A platform must be installed on the unit prior to use.

The unit is shipped with the four Allen (hexagonal, countersunk) head platform screws installed in the subplatform of the bearing housing. These screws must be removed before installing a platform. The Allen (“hex”) wrench is provided.

NOTE:

There are two small plastic straps holding the bearing housing in place during shipping. The straps must be removed from the unit.

1. Using the 7/32-inch hex wrench provided, remove the four Allen head platform screws from the sub-platform.
2. Place the platform on the SUBPLATFORM. Align the mounting holes of the platform with the platform screw locations in the SUBPLATFORM.
3. Insert the four platform screws (Allen head) provided and tighten them with the 7/32-inch hex wrench provided to secure platform.

Figure 2: Platform Screw Locations
5.2 Installing Flask Clamps

Flask clamps purchased for use with universal platforms (see Section 9.2) require installation. Clamps are installed by securing the base of the clamp to the platform with the correct type and number of screws. All clamps are shipped complete with hardware.

Clamps for 2-, 2.8- and 4-liter flasks are shipped with an additional girdle to keep the flasks in place. The girdle is an assembly of springs and sections of rubber tubing. One girdle is already in place on the clamp, the other is packed separately. To install these double girdle clamps:

1. Place the clamp on the platform, aligning its mounting holes with holes on the platform. Secure the clamp in place using the flat Phillips head screws provided (#S2116-3051, 10-24 x 5/16-inch). Use Figure 3b to help you identify the proper screws, as three different types of screws are shipped with the clamps.
2. With the first girdle in place, as delivered, on the upper part of the clamp body (see Figure 3a), insert an empty flask into the clamp.
3. After making sure the sections of tubing are located between the clamp legs, roll the first girdle down the legs of the clamp as far as it can go. The tubing sections will rest against the platform, and the springs will be under the clamp base.
4. Place the second girdle around the upper portion of clamp body (just as the first girdle was initially). Make sure that its spring sections rest against the clamp legs, while its rubber tubing sections sit against the flask, in between the clamp legs.

![Figure 3a: Double Girdle Clamp Installation](image1)

![Figure 3b: Clamp Fastener](image2)
NOTE:

The upper girdle secures the flask within the clamp, and the bottom girdle keeps the flask from spinning.

NBS flask clamps are used on a variety of shaker platforms. Flat head screws of different lengths and thread pitch are used to secure the clamp, and all types are provided when you purchase clamps. To identify the proper screw for your shaker application by reference to the head style, consult Table 1 below, find the proper screws and set the others aside:

Table 1: Clamp Hardware Application Chart

No matter what size the clamp, use these screws to fasten them to your platform:

<table>
<thead>
<tr>
<th>Description</th>
<th>Part Number</th>
<th>Qty.</th>
<th>Application</th>
</tr>
</thead>
<tbody>
<tr>
<td>10-24 x 5/16 (7.9 mm) flat Phillips (+) head screw</td>
<td>S2116-3051</td>
<td>1</td>
<td>5/16“ (7.9 mm) thick aluminum, phenolic and stainless steel platforms.</td>
</tr>
</tbody>
</table>

5.3 Electrical Connections

Before making electrical connections, verify that the power source voltage matches the voltage on the ELECTRICAL SPECIFICATION PLATE and the ON/OFF SWITCH is on the OFF position. The ELECTRICAL SPECIFICATION PLATE is located on the side panel of the unit near the ON/OFF SWITCH. Connect the POWER CORD to the POWER CONNECTOR and the other end to a suitable, grounded receptacle.
Figure 4: C-25 and C-25KC Rear Panel
6  Operation

6.1 Starting the Shaker

To initially start the shaker, close the lid and turn the ON/OFF SWITCH on the front panel of shaker to the ON position. If the shaker begins to operate, the LED DISPLAY will track the speed as it accelerates to the last entered setpoint. The shaking action may be stopped or started by pressing the START/STOP KEY.

**Figure 5: C-25 and C-25KC Front Panel**

**NOTE:**

The shaker will not operate if the lid is open. This is indicated by the word “lid” appearing in the LED DISPLAY.
6.2 Continuous (Unlimited) Run

1. Press SELECT until the RPM INDICATOR is illuminated.
2. If the display indicates that the shaker is OFF, press the START/STOP KEY.
3. Press either ▲ or ▼ KEY to enter SET MODE (the SET INDICATOR will illuminate).
4. Set the speed by using the ▲ or ▼ KEY until the desired setpoint is displayed.
   Holding the ▲ or ▼ KEY will cause the setting to change more rapidly.

**NOTE:**

The setpoint may be changed during a run without stopping the shaker by following steps 2-4 above. During speed changes, a visual alarm (flashing RPM INDICATOR) will flash and an audible alarm will sound until the speed returns to within 5 rpm of the setpoint.

6.3 Checking a Setpoint

1. Press SELECT until the desired indicator is illuminated.
2. Press either ▲ or ▼ KEY to enter the SET MODE and display the current setpoint.

**CAUTION!**

Holding the ▲ or ▼ key for more than 0.5 seconds causes the speed setpoint to change. Should this occur, resetting will be necessary.

6.4 Timed Functions

The shaker may be programmed to automatically stop after a preset time period of 0.1 hour - 99.9 hours. There must be power to the shaker in order to set the timer. However, a timed run can be initiated while the unit is either shaking or stopped.

To set the timer:

1. Press the SELECT KEY until the HRS INDICATOR is illuminated.
2. Press either ▲ or ▼ KEY to enter the SET MODE and set between 0.1 - 99.9 hours.
3. While the SET INDICATOR is illuminated, press the START/STOP KEY to program the time (and start the run). The TIME INDICATOR will light and remain on for the duration of the run. At the end of the timed run the display will read OFF, the TIME INDICATOR will flash and the audible alarm will “beep”.

M1246-0051 C-25 & C-25KC Classic Incubator Shakers User’s Guide

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com
To disable the visual alarm (flashing **TIME INDICATOR**), press the **SELECT KEY** and change to any other function.

**To cancel the timer without stopping the shaker:**

Repeat steps 1 and 2. Then immediately press the **START/STOP KEY**. The **TIME INDICATOR** will cease to flash and the display will read **OFF**.

### 6.5 Alarm Functions

The C-25 and C-25KC shakers have an audible alarm which is activated at predetermined times. To deactivate the alarm:

1. Press **SELECT** until the **HRS INDICATOR** is illuminated.
2. Simultaneously press the ▲ and ▼ KEYS. The **SET** and **MAINT INDICATORS** will flash.
3. While the **SET** and **MAINT INDICATORS** are flashing press the **START/STOP KEY**.

The alarm may be reactivated by repeating steps 1-3. The **MUTE INDICATOR** will illuminate.

### 6.6 Temperature Setpoint

Press the **SELECT KEY** until the function **°C INDICATOR** illuminates. The temperature can be set from 7°C above (for C-25) and 15°C below (for C-25KC) the current ambient temperature up to 60.0°C. Increasing or decreasing the setpoint is accomplished with the ▲ or ▼ KEY.

During operation, if the temperature of the chamber is more than 1.0°C higher or lower than the temperature setpoint, an alarm is triggered. This alarm consists of a flashing **°C INDICATOR** and audible beep. The alarm will automatically deactivate as the unit achieves the set temperature.

If desired, the temperature control system of the C-25KC may be shut off during set-up for special investigations.

1. To deactivate the temperature control system press and hold the ▼ KEY until the setpoint is at 4.0°C.
2. Holding the ▼ KEY, press the **START / STOP KEY**.
3. The temperature setpoint display shows **OFF** and neither the heater nor the refrigeration system will be activated.
4. To reactivate the temperature controller, press the ▲ KEY until the desired temperature setpoint is displayed.
6.7 Total Running Time

The control modules of the C-25 and C-25KC shaker totalize the time the shaker has been “ON” to track hours of usage. To display the accumulated running time:

1. Press SELECT until the HRS INDICATOR is illuminated.
2. Simultaneously press the ▲ and ▼ KEYS.

The SET and MAINT INDICATORS will flash and the accumulated running time will be displayed in hundreds of hours (i.e., “02” equals 200 hours; “102” equals 10,200 hours). This display will continue for 10 seconds and then default to the previous mode readout.

6.8 Maint Indicator

After 10,000 hours of operation, the MAINT INDICATOR will illuminate. Preventive maintenance is recommended at this point.

To deactivate the MAINT INDICATOR:

1. Press SELECT until the HRS INDICATOR is illuminated.
2. Simultaneously press the ▲ and ▼ KEYS.
3. Press the ▼ KEY.

6.9 Power Failure

In the event of a power failure, the C-25 and C-25KC shakers are equipped with an automatic restart function.

If the shaker was in operation prior to the power interruption, the shaker will begin to operate at its last entered setpoint. The LED DISPLAY will flash indicating that a power failure has occurred. Press any key to cease the flashing in the display.
7 PREVENTIVE MAINTENANCE

WARNING!
Always turn off the shaker and disconnect the power cord from the power supply BEFORE performing any maintenance on the unit.

7.1 Cleaning External Surfaces

The unit may be cleaned using a damp cloth or any standard, household or laboratory cleaner to wipe down its outer surfaces. Do not use abrasive or corrosive compounds to clean this instrument, as they may damage the unit and void the warranty.

7.2 Fuse Replacement

The C-25 and C-25KC require two electrical fuses. They are housed in the fuse holders located on rear panel of the unit near the POWER CORD CONNECTOR (see Figure 4, repeated below):

Figure 4: C-25 and C-25KC Rear Panel
To check or replace a fuse:

1. Set the **ON/OFF SWITCH** to off and disconnect the **POWER CORD** from the power source.
2. Insert a small flat bladed screwdriver into the fuse holder groove and turn counterclockwise until it disengages and the fuse holder springs free.

   **Figure 6: Fuse Holder (detail)**

3. Check the fuse and if it has failed, replace the fuse.

### 7.3 Belt Replacement

To replace the shaker’s drive belt:

1. Turn off the unit, and disconnect the power cord from the power source.
2. Open the lid.
3. Remove the platform, setting the platform and platform screws aside.

Refer to Figures 7 & 8 on the following page as you continue the procedure.
4. Loosen and remove the hardware that attaches the FLEXURES to the MOVER PLATE (see Figure 8 below):

Figure 8: Flexure Attaching Hardware
(Reverse View)

5. Using your fingers, reach under the SUBPLATFORM and move the BELT so that it falls off the DRIVE PULLEY. Remove the belt from the BEARING HOUSING PULLEY.
6. Grab the belt from underneath the sub-platform, pull it forward and over one corner of the subplatform. Repeat for the other corner until the belt clears the subplatform, but is constrained by the mover plate.
7. Slide the belt to one of the unattached sides of the mover plate and pull it through the opening.
8. Slide the belt to the other side of the mover plate, pull it through the opening, and remove it from the unit.
9. Install the replacement belt in similar fashion.
10. Reattach the FLEXURES to the MOVER PLATE.
11. Reinstall the platform if desired, and close the lid.
12. Reconnect the power cord to the unit.
8 TROUBLESHOOTING

If any problems occur with your shaker, **do not attempt to perform any service on the unit other than specified in this manual.** Unauthorized servicing may void the warranty. Please contact your local NBS Sales Order Department.

In any correspondence with NBS, please refer to the Model Number and Serial Number of your unit. This information is on the **ELECTRICAL SPECIFICATION PLATE**, located on the side panel of the unit near the **ON/OFF SWITCH**.
When ordering replacement or accessory parts, or requesting service information, please provide the Model Number and Serial Number of your shaker. This information is on the **ELECTRICAL SPECIFICATION PLATE**, located on the side panel of the unit.
